

## CAT6

Category 6, ISO Class E with a bandwidth of 250 MHz, can be used for 100 Mbps and 1000 Mbps Ethernet networks, up to a maximum length of 100 meters. 10 Gigabit Ethernet can be used for a maximum length of 55 meters. The maximum length is 37 meters when the cables are bundled, due to alien crosstalk. Besides Ethernet, these cables are also suitable for other protocols, such as Profinet, ATM, Token Ring and RS-232 up to a distance of 100 meters.

The different cable types with the	the corresponding shielding
------------------------------------	-----------------------------

U/UTP Unshielded twisted pair. F/UTP Twisted pair cable with foil shielding. SF/UTP Twisted pair cable with foil and braided shielding. U/FTP
Twisted pair cable
with foil shielding for
each wire pair separately.

S/FTP
Twisted pair cable
with foil shielding for each
wire pair plus additional
braided shielding wrapped
around all pairs.

### ACT component level patch cable

### ACT component level patch cables

Flexibility in your network is achieved by using consolidation points. But consolidation points add an extra transition to your cabling. This can affect the reliability of your network.

Did you know that an additional transition/cable in the network also adds two additional connectors? (Each cable has two connectors). This results in an additional connector transition in the horizontal cabling: the so-called 4-connector model.

ACT component level patch cords compensate for extra transitions in your network thanks to the very high quality. The component level patch cables are used when using an extra consolidation point in your network and at cross-connects.

An ACT component level patch cable must always meet the set standards in the field of transmission speeds.

These are the best quality patch cords where extra attention is paid to the mounting of the cable in the connector. Everything to ensure that there is as little loss of speed as possible.

## ACT CAT6 component level U/UTP PVC snagless patch cable, AWG24 CU, 50µ gold-plated contacts

## When to use slimline patch cable?

Slimline patch cables can be used where cable space is limited, such as in a data center.

The slimline version of standard patch cables is more than 40% smaller in diameter. These thin cables reduce the amount of cable space required in racks. This ensures maximum energy efficiency, better cable management and space savings.
